

GS40 and GS60 Series

AC Inlet Appearance Revision Notice

The AC inlet currently used on MEAN WELL external industrial adaptor GS40 and GS60 series will be gradually replaced by the new version due to the integration plan of the raw material supplier. In order to assure our clients of sufficient stock and on-time delivery of GS40 and GS60 series during this material substitute period, MEAN WELL conducts this revision to alter the new AC inlet for these two series.

The difference between the original and the new AC inlet is merely on the appearance whereas the size of the socket remains the same. MEAN WELL has finished the safety certification related works for this revision, this change of AC inlet does not affect the electrical specification, the certifications of the products, and the plugging for users. Should there be any questions, please contact MEAN WELL sales representatives.

1. Revision Schedule: Production version switch will start on **2016/11/8 (W1611D production lot)**
2. Revision Overview:

Revision models		GS40/GS60 Series (including modified models)
